Amputated limbs

Content Warning: this photo shows graphic content that may be upsetting to some students

Amputated legs and feet in a pile at a Civil War army hospital. About 60,000 surgeries were conducted during the American Civil War and about a quarter of them were amputations. The large number was in part due to the large number of wounded and the limited time to care for everyone, and newly minted doctors. Many of the doctors had never conducted a major operation or done dissection.

Usage Statement:

Public Domain

Public Domain is a copyright term that is often used when talking about copyright for creative works. Under U.S. copyright law, individual items that are in the public domain are items that are no longer protected by copyright law. This means that you do not need to request permission to re-use, re-publish or even change a copy of the item. Items enter the public domain under U.S. copyright law for a number of reasons: the original copyright may have expired; the item was created by the U.S. Federal Government or other governmental entity that views the things it creates as in the public domain; the work was never protected by copyright for some other reason related to how it was produced (for example, it was a speech that wasn't written down or recorded); or the work doesn't have enough originality to make it eligible for copyright protection.
