

Satellite image of North Carolina

Satellite image of North Carolina

The Appalachian Mountains look like burnished copper in this true-color Moderate Resolution Imaging Spectroradiometer (MODIS) image from the Terra satellite on November 2, 2002. Nestled among the ridgelines are still-green valleys. Shown are (top tier, left to right) Indiana, Ohio, West Virginia, Pennsylvania, and New Jersey. Second tier from top shows Kentucky, Virginia, Maryland, and Delaware. Third tier shows Tennessee and North Carolina, and bottom tier shows Alabama, Georgia, and South Carolina.

Citation (Chicago Style):

NASA. *North Carolina Satellite Image*. November 2, 2002. Satellite imagery. <https://visibleearth.nasa.gov/>

Usage Statement:

Public Domain

Public Domain is a copyright term that is often used when talking about copyright for creative works. Under U.S. copyright law, individual items that are in the public domain are items that are no longer protected by copyright law. This means that you do not need to request permission to re-use, re-publish or even change a copy of the item. Items enter the public domain under U.S. copyright law for a number of reasons: the original copyright may have expired; the item was created by the U.S. Federal Government or other governmental entity that views the things it creates as in the public domain; the work was never protected by copyright for some other reason related to how it was produced (for example, it was a speech that wasn't written down or recorded); or the work doesn't have enough originality to make it eligible for copyright protection.
