

Universalis Cosmographia 1507

Universalis Cosmographia 1507

Universalis Cosmographia 1507

Universalis Cosmographia is a twelve-panel wall map of the world drawn by German cartographer Martin Waldseemüller and originally published in April 1507. It was one of the first maps to chart latitude and longitude precisely, following the example of Ptolemy, and was the first map to use the name "America".

Usage Statement:

Public Domain

Public Domain is a copyright term that is often used when talking about copyright for creative works. Under U.S. copyright law, individual items that are in the public domain are items that are no longer protected by copyright law. This means that you do not need to request permission to re-use, re-publish or even change a copy of the item. Items enter the public domain under U.S. copyright law for a number of reasons: the original copyright may have expired; the item was created by the U.S. Federal Government or other governmental entity that views the things it creates as in the public domain; the work was never protected by copyright for some other reason related to how it was produced (for example, it was a speech that wasn't written down or recorded); or the work doesn't have enough originality to make it eligible for copyright protection.
