

year-round education ^[1]

Type of Speech:

noun ^[2]

Definition:

Model of education in which students attend school throughout the year with regular short breaks.

Additional Information:

Advocates of year-round schools argue that they provide three primary benefits:

- More frequent breaks for students and teachers help to prevent burn-out.
- Schools can address overcrowding without building new facilities, by staggering student attendance.
- The need for extensive review and re-teaching at the beginning of a traditional academic year is eliminated, and more time left for teaching new material.

Year-round schools do not alter the minimum number of required school days in an academic year.
