^[2]Short line mountain [railroads](#) ^[3] are often miracles of construction. Built primarily for shipping logs, the Mount Mitchell Railroad was no exception. Within a span of 21 miles, the road climbed 3,500 feet, but utilized only three trestles and nine switchbacks, while maintaining a grade of five and a half percent. Access to the mountain, located in Western North Carolina, was slow and difficult; but after completion of the railroad, a [timbering industry](#) ^[4] was born. The railroad also provided tourists with scenic trips along its rugged contours. When passenger service was discontinued, a motor toll road was built over much of the same route. Its completion marked the first time visitors could travel to [Mount Mitchell](#) ^[5] using their automobiles.
